

THE GOOD STUFF

1

Protection from fungi and termites alike

T3 Green packs a double punch when it comes to protecting your home. Not only does it stop termites in their tracks, it also protects against fungal attack making it ideal for wet areas and outdoors alike. Left to mother nature, fungi spores readily germinate in moisture exposed timber, which leads to irreversible wood rot and structural damage. But not if you use the good stuff.

2

A truly renewable building material

The good stuff comes from PEFC certified, sustainably managed Australian plantations. In fact, it takes just 150 seconds for Australian plantations to grow enough new timber to build a typical Aussie home. Good to know.

3

Australian grown, Australian made

We make the good stuff from local sustainably grown plantations and process logs into structural products, right here, in Australia for our harsh climate. This way we know our timber will stay straight and perform on the job.

4

Treated to the core

T3 Green penetrates both sapwood and difficult-to-treat heartwood fibers, with treatment levels meeting or exceeding the Australian Standards.

5

Independently certified

We take quality seriously, which is why our treatment is independently certified and audited by Codemark® Australia to ensure consistent quality for the build and peace-of-mind for homeowners.

6

Safe and sound

Hyne's VOC-free formula is a high performance alternative to traditional CCA and LOSP treatments. T3 Green is a water-based treatment that is safe for humans and mammals alike. In fact, it even gets the thumbs up from the Australian Pesticides and Veterinary Medicines Authority.

GOOD IN THE
DRY. GREAT
WET AREAS

Guaranteed for 25 years

We have been manufacturing Aussie timber for over 140 years, so you know we're in it for the long haul. We know our product lasts, so you can be confident too. If our word isn't enough, rest assured we have a 25-year guarantee that is a testament to the rigorous standards and premium wood fibre that goes into every single length of T3 Green timber.

THERE'S THE ORDINARY STUFF & THEN THERE'S THE GOOD STUFF.

Our commitment to quality,
innovation and sustainability is
what makes Hyne Timber good for
builders, great for Australia, and
even better for planet earth.

Hyne Timber is made from renewable plantation pine that's
grown, milled and termite treated in Australia to the most
stringent 3rd-party certification requirements.

Q&A

What is T3 Green?

It's structural timber with a next-generation treatment that provides both fungal and termite prevention. Use it indoors or outdoors, in wet areas or dry.

What makes it so special?

Firstly, it doesn't smell. But unlike other 'low odour' H3 treated products, T3 Green has no Volatile Organic Compound (VOC) emissions. It's also a water-based treatment. Combined T3 Green is safe for you, your kids, and your subbies alike.

So it's safe. But is it durable?

Both the sapwood and heartwood fibres are T3 Green treated to resist fungal decay and termite attack, and meets or exceeds Australian Standards.

What's in the treatment?

T3 Green is made from ingredients commonly used to protect food crops from pests as well as organic fungicides.

Is it environmentally friendly?

More than ever. Made from sustainably grown plantation pine, and using water-based treatment, T3 Green is one of the safest and most eco-friendly treated timber products available.

Where can I use it?

T3 Green is suitable for use in indoor and outdoor above ground applications, and is specifically designed to perform in weather exposed or humid areas. It provides protection for outdoor decking, verandah and pergola structures, and indoor framing in kitchens, laundries and bathrooms. T3 Green can be used throughout Australia, protecting it from termite or borer attack, as well as fungal attack and rot.

Size & Specs

Durability

H3 treated

For internal and external, above ground applications. Suitable for use anywhere in Australia.

Grades

MGP10
(Most common structural grade)

MGP12
(High strength grade)

Sizes

35mm thickness
70, 90, 140, 190

45mm thickness
70, 90, 140, 190, 240

THE GOOD STUFF IS STRAIGHT AND STABLE

At Hyne, we have spent over 140 years honing our craft in pursuit of the good stuff. Over generations we have refined what we do, from log selection, to milling and drying, right through to our industry leading treatment. Our timber is designed to stay straight and perform on the job, making light work of bearers and joists.

FUN(GI) FACTS

- 1 Timber with high moisture content creates an ideal environment for fungi to thrive.
- 2 Fungi cause wood rot by secreting enzymes that weaken wood fibers.
- 3 Preventing wood rot requires proper ventilation, preservative treatment and a well maintained protective coating product.

Moisture, warmth, and fungi are the key factors that encourage wood rot, while T3 Green offers protection against both wood rot and termites.

THE GOOD STUFF.
