

THE GOOD STUFF

THERE'S THE ORDINARY STUFF & THEN THERE'S THE GOOD STUFF.

Our commitment to quality, innovation and sustainability is what makes Hyne Timber good for builders, great for Australia, and even better for planet earth.

Hyne Timber is made from renewable plantation pine that's grown, milled and termite treated in Australia to the most stringent 3rd-party certification requirements.

W

1

A truly renewable building material

The good stuff comes from PEFC certified, sustainably managed Australian plantations. In fact, it takes just 150 seconds for Australian plantations to grow enough new timber to build a typical Aussie home. Good to know.

2

Low maintenance and cost effective

Unlike barriers, meshes, or sprays, T2 Red is good to go for decades to come. Forget costly annual maintenance, all we recommend to protect the structure of the home from termite or borer attack is to ensure it's built with T2 Red and its surrounds don't become a jungle. Good common sense really.

3

Australian grown, Australian made

We make the good stuff from sustainable, locally grown Aussie logs, that are processed into structural products, right here, in Australia for our harsh climate. So we know our timber will stay straight and perform on the job.

4

Treated to the core

Because the T2 Red treatment is termite resistant to the core, making it safe to cut, notch or drill without resealing.

5

Independently certified

We take quality seriously, which is why our treatment is independently certified and audited by Codemark® Australia to ensure consistent quality for the build and peace-of-mind for homeowners.

6

Safe and sound

Hyne's T2 Red is an industry-leading termite treatment formula that isn't carcinogenic, mutagenic, reproductive, sensitising, or a hazard to humans or mammals alike. In fact, it even gets the thumbs up from the Australian Pesticides and Veterinary Medicines Authority.

D

WHAT MAKES T2 RED SO DARN GOOD?

Guaranteed for 25 years

We have been manufacturing Aussie timber for over 140 years, so you know we're in it for the long haul. We know our product lasts, so you can be confident too. If our word isn't enough, rest assured we have a 25-year guarantee that is a testament to the rigorous standards and premium wood fibre that goes into every single length of T2 Red timber.

Q&A

How can I tell it's the good stuff?

T2 Red is made exclusively by Hyne Timber. If it's not marked at regular intervals with the our logos then it's not the good stuff.

Is it safe?

T2 Red uses a light organic compound that mimics the termite resistant properties of some plant species. The active ingredients are similar to those found in head lice shampoos meaning it is safe for you, your kids and your subbies alike.

How long does the treatment last?

T2 Red is formulated to last for the life of the home.

Do I still need a termite barrier?

No. T2 Red can be used standalone or in conjunction with termite barrier systems.

Is it environmentally friendly?

Our T2 Red is made from sustainably grown plantation pine, which has a lower net environmental impact than most other building materials, making it a truly sustainable choice.

Does it need to be resealed?

Unlike other treated framing brands, T2 Red does not require cut ends, notching, trenching or drill holes to be resealed.

Will it corrode metal fittings or fasteners?

No. Use normal nails and plates as fixings.

What should I do with the offcuts?

You should be able to dispose of offcuts through normal trade waste collection services. For large volumes check with your local waste service authority for disposal restrictions.

Does it meet Australian Building Codes?

It surely does. T2 Red is independently quality assured through 3rd party auditing by CodeMark® Australia and therefore conforms to the ABCB Building Code of Australia.

Is it really Australian made?

You betcha it is, we've even got a kangaroo to prove it. It's even better than Australian made though because it's Aussie grown too!

Where can I use it?

T2 Red is specifically designed for use in indoor, above ground applications. T2 Red provides protection against the big nasty termites (aka mastotermes darwiniensis) found north of the Tropic of Capricorn.

Size & Specs

Durability T2 Red treated
For resistance to termite attack. Suitable for use anywhere in mainland Australia.

Grades F5 (Base structural grade) MGP10 (Most common structural grade) MGP12 (High strength grade)

Sizes 35mm & 45mm thickness 70, 90, 140, 190 Lengths 2.4m, 2.7m, 3.0m, 3.6m, 4.2m, 4.8m, 5.4m, 6.0m

THE GOOD STUFF IS STRAIGHT AND STABLE

At Hyne, we have spent over 140 years honing our craft in pursuit of the good stuff. Over generations we have refined what we do, from log selection, to milling and drying, right through to our industry leading treatment. Our timber is designed to stay straight and perform on the job, making light work of frames and trusses.

TERMITE FACTS

- 1 Termites will tunnel up to 50 metres in search of food and shelter.
- 2 CSIRO research shows 80% of all Aussie homes are within 25 metres of an active termite nest.
- 3 Termites cause more damage every year than Fire and Storms combined.
- 4 There are over 350 species of termites, white ants and borers in Australia.

Untreated timber might shave a little money off your build, but termites have a knack for coming back to bite you.

THE GOOD STUFF.
